ECTN - European Chemistry Thematic Network Association

The ECTN, European Chemistry Thematic Network Association,is a non-profit making association registered in Belgium and is an outcome of six years of network activity (1996-2002). The Association was created to provide a sustainable future for the European Chemistry Thematic Network.

Higher **education** institutions, national chemical societies and chemical and **software** companies comprise our members. There are currently over 120 members of the network coming from 30 different European countries and with associate members world-wide.

Expert European groups work on a range of topics and produce reports with a real European dimension. These reports and recommendations are available on our website.

A multi-lingual series of tests, that can be used for certification / validation of competence in chemistry at various levels is now available on **Internet**. Associated E-learning facilities have been produced. The purpose of the tests is to validate the competence of all citizens, irrespective of their learning path.
